General Descriptions,

The soil in general, in this tract, and land is poor & sandy & the sand of a yellowish color: The timber is chiefly Blk & W. Oak, & no Mud, & the,

T. 31 N. R. 1 W. 2nd Mer. (Ind.^a)

The wet prairie level & the soil within of a black sandy loam; The growth on them is a coarse Red Top grass. In many of the large prairies the grass on the borders is coarse, but approaching the interior of them, the grass is found to be of a finer kind intermixed with a yellow top, & Cranberry vines. This sod becomes thin & rotten. Under the sod is a brown loam almost as thin as water in many places. These are called Cranberry marshes.

The marsh prairies are a species of the wet prairie, occasioned by deep standing water, which penetrates into & soaks with the soil. The growth thereon is coarse red top grass & flag weed. The standing water on the prairie, especially near the S. E. corner of the township, is occasioned by a lake - adjacent thereto, which is very nearly on a level with the prairie. The out let or creek near the lake, has a slow current. The water on each side in the prairie is very near the same depth as in the bed of the creek.

I hereby certify that in pursuance of a contract with M. T. Williams, Sur. Genl. of the U.
